Election/Restrictions

2. This application is in condition for allowance except for the presence of claims 3-9 and 14-20 directed to a species non-elected without traverse.

3. **Accordingly, claims 3-9 and 14-20 have been cancelled.**

5. Claims 1-2, 10-13 and 21-22 are allowed.

6. **The following is an examiner's statement of reasons for allowance:**

As per claims 1, 10 and 11 primarily, the prior art of record, taken alone or in combination thereof, does not disclose or suggest in the claimed combination:

a step of, when specific selection conditions are satisfied, the specific selection conditions including (i) the current in charging and discharging the secondary battery is within a first predetermined range, (ii) a number of the plurality of pairs of data is greater than or equal to a predetermined number, and (iii) a charge/discharge electricity amount during collection of the plurality of pairs of data is within a second predetermined range, calculating a no-load voltage as a voltage intercept at a current of zero in a straight-line approximation obtained by statistical processing with respect to the plurality of pairs of data,

a step of, when the specific selection conditions are not satisfied and one of specific current conditions and voltage conditions continue to be met for a certain amount of time, calculating an open circuit voltage from the terminal voltage of the secondary battery, the component resistance of the secondary battery and an average current.

As per claims 12, 21 and 22 primarily, the prior art of record, taken alone or in combination thereof, does not disclose or suggest in the claimed combination:

when specific selection conditions are satisfied, the specific selection conditions including (i) the current in charging and discharging the secondary battery is within a first predetermined range, (ii) a number of the plurality of pairs of data is greater than or equal to a predetermined number, and (iii) a charge/discharge electricity amount during collection of the plurality of pairs of data is within a second predetermined range, calculates a no-load voltage as a voltage intercept at a current of zero in a straight-line approximation obtained by statistical processing with respect to the plurality of pairs of data,

an open circuit voltage calculation part that, when the specific selection conditions are not satisfied and one of specific current conditions and voltage conditions continue to be met for

a certain amount of time, calculates an open circuit voltage from the terminal voltage of the secondary battery, the component resistance of the secondary battery and an average current.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
